

CODE: T9300 M3850/2

ID NOS: HBX94731 A17407

DIAGNOSIS: BILATERAL ADRENAL HAEMORRHAGE

CLINICAL HISTORY: F/56. The patient was on peritoneal dialysis for chronic renal failure. She developed peritonitis with septicaemia and died.

MACROSCOPIC: The specimen shows portions of both adrenal glands which are enlarged and haemorrhagic. The haemorrhage is predominantly in the medulla surrounded by a narrow rim of cortex.

MICROSCOPIC: Sections show haemorrhage and necrosis of the adrenal tissue.
