

**CODE:** T9300 M8700/3

**ID NOS:** HBX290990 177768

**DIAGNOSIS:** ADRENAL GLAND - PHAEOCHROMOCYTOMA

**CLINICAL HISTORY:** F/age unknown. The right adrenal gland was removed for phaeochromocytoma.

**MACROSCOPIC:** The specimen is a bisected portion of an encapsulated, dark pink, ovoid nodule which originally measured 55x42x38mm and weighed 50g.

**MICROSCOPIC:** The tumour is has a fibrous capsule and there is a rim of adjacent normal adrenal tissue above (left image). The tumour cells are arranged in sheets, nests and cord and contain a moderate amount of granular basophilic cytoplasm (right image).
