

CODE: T9600 M7233/4

ID NOS: 19618

DIAGNOSIS: THYROID – NODULAR COLLOID GOITRE

CLINICAL HISTORY: F/65. The patient had an enlarged irregular thyroid of long standing. Hemithyroidectomy was performed for cosmetic reasons.

MACROSCOPIC: This thyroid lobe is markedly enlarged and on the cut surface is seen to be made up of gelatinous nodules separated by fibrous septa. Cystic degeneration is commencing in the large central nodule and pale flecks of calcification are present towards the upper pole.

MICROSCOPIC: Thyroid follicles are distended with colloid and are seen adjacent to follicles of relatively normal size.
