

CODE: T9600 M7233/5

ID NOS: 5095

DIAGNOSIS: THYROID - MULTINODULAR COLLOID GOITRE

CLINICAL HISTORY: M/24. The only information available is that the patient had thyroidectomy performed because of dysphagia.

MACROSCOPIC: Specimen consists of one lobe of the thyroid gland which has been bisected and laid open. Nodularity is apparent on both the capsular and cut surfaces. The nodules are separated by fibrous septa and their substance is variegated.

MICROSCOPIC: Sections show nodules with many thyroid follicles distended with colloid; foci of pseudo-papillary hyperplasia are seen in some nodules (bottom right of image).
