

**CODE:** T8400 M8210/1

**ID NOS:** HX25462 A11630

**DIAGNOSIS:** ENDOMETRIAL POLYP.

**CLINICAL HISTORY:** F/76. This patient died of cardiac failure and bronchopneumonia. The uterine appearance was an incidental finding at autopsy.

**MACROSCOPIC:** The uterine cavity is filled with gelatinous looking tissue honey combed by many small cysts, the largest 3-4mm in diameter.

**MICROSCOPIC:** The lesion is an endometrial polyp and is made up of small cystically dilated glands containing mucus, lined by cuboidal epithelium. There is patchy intervening fibrous stroma.
