

**CODE:** T8700 M8810/2

**ID NOS:** Donated specimen 19

**DIAGNOSIS:** OVARY – FIBROMA

**CLINICAL HISTORY:** F/45. The patient presented with right lower abdominal discomfort, and a mass was felt. At laparotomy, a firm nodular mass arising from the right ovary was resected.

**MACROSCOPIC:** The tumour measures 150mm in maximum diameter. The external surface of the tumour is nodular, and there is an attached fallopian tube (left image). The cut surface shows yellowish tissue with foci of cyst formation (right image).

**MICROSCOPIC:** The features are those of a fibroma with bundles of bland spindle cells admixed with collagen fibres.
