

**CODE:** T56000 M81703

**ID NOS:** HX220337 155802

**DIAGNOSIS:** LIVER - HEPATOCELLULAR CARCINOMA

**CLINICAL HISTORY:** M/70. An asymptomatic liver mass found during X-ray examination for arterial disease. Partial hepatectomy performed.

**MACROSCOPIC:** Specimen consists of portion of liver largely replaced by tumour. The cut surface shows nodular masses of greyish white tumour with some haemorrhagic areas. The adjacent liver is pale and compressed (microscopy showed cirrhotic changes).

**MICROSCOPIC:** Section shows rather pleomorphic cells arranged in solid and trabecular patterns with scanty stroma. Numerous mitoses and some tumour giant cells are present.
