

CODE: T5700 M3100/2

ID NOS: Lewisham Hospital 128

DIAGNOSIS: GALL BLADDER – CHOLELITHIASIS

CLINICAL HISTORY: Donated specimen – no known history.

MACROSCOPIC: The gall bladder contains five stones which appear to be mulberry-like aggregates of smaller pale stones. These are most likely cholesterol stones, possibly with admixed calcium salts.

MICROSCOPIC: No photomicrographs.
