

CODE: T5700 M3526/2

ID NOS: HX196124 39256

DIAGNOSIS: GALL BLADDER – MUCOCOELE AND CHOLELITHIASIS.

CLINICAL HISTORY: F/66. Cholecystectomy was performed after a long history of gallbladder disease.

MACROSCOPIC: The gall bladder is distended and its wall is thin and translucent. It had contained clear mucus. Three faceted calculi were found in the lumen and one calculus was firmly impacted in the cystic duct causing complete obstruction.

MICROSCOPIC: Section of the gall bladder shows attenuated and flattened epithelium with fibrous replacement of the muscularis.
