

CODE: T65300 M72550

ID NOS: HX299255 151295

DIAGNOSIS: ILEOCAECAL VALVE - LIPOHYPERPLASIA

CLINICAL HISTORY: M/70. The patient had sigmoid colectomy for adenocarcinoma followed by total colectomy for persistent PR bleeding (due to diverticular disease).

MACROSCOPIC: The specimen consists of portion of terminal ileum and caecum which has been opened to show the ileo-caecal valve opening is surrounded by a collar of soft yellow tissue.

MICROSCOPIC: The section shows excess adipose tissue in the submucosa.
