

CODE: T67000 M82611

ID NOS: H44104 156261

DIAGNOSIS: COLON – VILLOUS ADENOMA

CLINICAL HISTORY: M/80. Investigation of persistent iron deficiency anaemia revealed a villous tumour of the sigmoid colon, which was resected.

MACROSCOPIC: The specimen consists of a portion of colon which has been opened to show a sessile polypoid tumour with multiple papillary projections, extending approximately 120mm along the bowel.

MICROSCOPIC: Sections show a tumour with finger-like branching papillae (left image). The epithelial lining cells are mildly dysplastic columnar cells (right image). No evidence of high grade dysplasia or malignancy was seen in this specimen.
