

**CODE:** T6700 M8143/4

**ID NOS:** 25007 8336

**DIAGNOSIS:** COLON – CARCINOMA ARISING IN POLYPOSIS COLI

**CLINICAL HISTORY:** M/44. This patient was known to have polyposis coli. A sigmoidectomy was performed.

**MACROSCOPIC:** The mucosal surface of this segment of colon is covered with numerous polyps. At the lower end there is a large cauliflower-like sessile mass 4cm diameter protruding into the lumen.

**MICROSCOPIC:** The sections of the large mass show well differentiated adenocarcinoma arising from a tubulovillous adenoma. One of the other polyps also showed early malignant change.
