

CODE: T68000 M95903

ID NOS: 176558

DIAGNOSIS: RECTUM – MALIGNANT LYMPHOMA (B-CELL)

CLINICAL HISTORY: M/80. The patient underwent an abdomino-perineal resection after a rectal biopsy revealed a high grade malignant lymphoma.

MACROSCOPIC: The specimen consists of a longitudinal slice of the rectum, and shows diffuse thickening of the rectal wall up to a thickness of 25mm.

MICROSCOPIC: The sections show a diffuse infiltration of atypical intermediate sized lymphoid cells, which extend from the rectal mucosa through the wall into the perirectal fat. The cells show positive staining for CD20 a pan B-cell marker.
