

CODE: T6900 M8073 & M7344

ID NOS: HX96857 139228

DIAGNOSIS: ANUS – SQUAMOUS CELL CARCINOMA, CONDYLOMA ACCUMINATA

CLINICAL HISTORY: M/64. The patient had a long history of anal warts, with recent two week history of per rectal bleeding. Biopsy showed squamous cell carcinoma, and a wide resection was performed.

MACROSCOPIC: The specimen consists of a small piece of anal skin with attached superficial condylomatous mass and underlying fibro-fatty tissue. The cut surface shows pale tissue extending from the mass into the underlying tissue.

MICROSCOPIC: Sections show a papillomatous hyperplastic squamous epithelial lesion typical of condyloma acuminata (left image). Deeper areas show evidence of invasive squamous cell carcinoma (right image).
