

CODE: T78000 M34210

ID NOS: 171466

DIAGNOSIS: TORSION OF TESTIS

CLINICAL HISTORY: M/16. The patient had pain in the left testis for five days.

MACROSCOPIC: The specimen consists of the lower part of the spermatic cord and testis, which is haemorrhagic and oedematous.

MICROSCOPIC: The testis shows marked haemorrhage and congestion (left image). Some seminiferous tubules are necrotic (right image).
