

CODE: T78000 M90713

ID NOS: 161280 231490

DIAGNOSIS: TESTIS – MIXED GERM CELL TUMOUR

CLINICAL HISTORY: M/18. The patient presented with an enlarged left testis.

MACROSCOPIC: The specimen consists of slice of testis, with almost complete replacement of the normal tissue by a partly cystic, necrotic and haemorrhagic tumour.

MICROSCOPIC: The tumour has a mixed pattern with foci of pale myxoid change, and areas of haemorrhage and necrosis (left image). There are sheets of round cells showing an embryonal carcinoma pattern (right image), with an endodermal sinus-like structure in the centre of the field indicating a yolk sac component.
