

CODE: T7800 M8016/1

ID NOS: 36779

DIAGNOSIS: TESTIS – METASTATIC ADENOCARCINOMA FROM PROSTATE

CLINICAL HISTORY: M/72. The patient had known carcinoma of the prostate. He presented with severe epididymo- orchitis. Bilateral orchiectomy was performed.

MACROSCOPIC: The testis is extensively involved by nodules of pale tumour with focal haemorrhagic areas.

MICROSCOPIC: The sections show nodules of tumour with some residual atrophic seminiferous tubules below (left image). The tumour is moderately differentiated adenocarcinoma with gland formation, and the tumour cells have prominent nucleoli (right image), in keeping with prostatic origin.
