

**CODE:** T7800 M9063/4

**ID NOS:** MX207688 17689

**DIAGNOSIS:** SEMINOMA OF TESTIS.

**CLINICAL HISTORY:** M/34. A painless testicular mass had been present for three years, gradually increasing in size. Orchiectomy was performed.

**MACROSCOPIC:** The specimen consists of a large well demarcated mass, with the remnant of a testis at the upper pole. The cut surface is pale with areas of necrosis and haemorrhage.

**MICROSCOPIC:** The tumour consists of nests and sheets of large pale cells separated by thin fibrous trabeculae, with scattered lymphocytes.
