

CODE: T7800 M9063/8

ID NOS: I66265

DIAGNOSIS: SEMINOMA OF TESTIS.

CLINICAL HISTORY: M/42. The patient had right orchiectomy performed for enlarge testis. Twelve years earlier he had a mixed germ cell tumour of the left testis removed.

MACROSCOPIC: The testis is markedly enlarged by a tumour which appears to be confined within the tunica albuginea. The cut surface shows creamy tissue with coarse lobulation.

MICROSCOPIC: There are sheets of large tumour cells with fine fibrous trabeculae. Scattered lymphocytes are present (left image). Adjacent seminiferous tubules show intra-tubular germ cell neoplasia (right image).
