

**CODE:** T7840 M8850/1

**ID NOS:** 27906.

**DIAGNOSIS:** FIBROLIPOMA OF TUNICA VAGINALIS.

**CLINICAL HISTORY:** A scrotal tumour affecting the right side had been present for two years. Its rate of growth had increased during the last six months. Orchidectomy was performed.

**MACROSCOPIC:** An ovoid circumscribed mass bulges downwards into the cavity of the tunica vaginalis. The spermatic cord can be seen above and distorted testis below. The attenuated lower portion of the cord coursed down on the right side of the tumour.

**MICROSCOPIC:** The picture is that of an intimate mixture of well differentiated adipose and fibrous tissue.
