

CODE: T7910 F9492/1

ID NOS: 1932 10259.

DIAGNOSIS: TUBERCULOUS EPIDIDYMITIS

CLINICAL HISTORY: M/60. Orchidectomy was performed for tuberculosis.

MACROSCOPIC: The pale comma shaped epididymis uniformly enlarged and its cut surface shows some pale caseous areas. Some nodular pale mottling of the testis suggests that the disease has spread to that organ.

MICROSCOPIC: Closely packed granulomas with occasional giant cells have replaced the normal glandular tissue.
