

CODE: T7930 M8890

ID NOS: 110898

DIAGNOSIS: LEIOMYOMA OF SPERMATIC CORD

CLINICAL HISTORY: M/?. This patient had complained of painless nodules along the spermatic cord.

MACROSCOPIC: The specimen consists of a portion of a nodule (originally 4cm maximum dimension). The cut surface shows cream coloured tissue with some whitish bands.

MICROSCOPIC: The tumour consists of interlacing bundles of spindle smooth muscle cells.
