

CODE: TX111 M9530/3

ID NOS: 480016 191727

DIAGNOSIS: BRAIN – CALCIFIED MENINGIOMA

CLINICAL HISTORY: F/65. The patient presented with neurological symptoms of right sided weakness. Xray and CT of the brain showed a highly calcified solid left parietal tumour.

MACROSCOPIC: The specimen consists of an ovoid, hard, solid mass 45x35x35mm with a nodular surface and a yellow/white cut surface.

MICROSCOPIC: The tumour consists of cells arranged in a whorled pattern with numerous calcified psammoma bodies.
