

CODE: TX200 M2482/1

ID NOS: HX25732 A13702

DIAGNOSIS: BRAIN – ARTERIO-VENOUS MALFORMATION

CLINICAL HISTORY: M/66. This lesion was an incidental finding in a man who died from cerebral softening of the contralateral cerebral hemisphere.

MACROSCOPIC: The section of the right cerebral hemisphere shows an abnormal group of blood vessels in the region of the insula. Most of the vessels are in the subarachnoid space, with some extending into the adjacent cerebral tissue.

MICROSCOPIC: An elastic stain shows that the vessels include arteries with a prominent internal elastic lamina and veins.
