

CODE: TX200 M3445

ID NOS: HX76488 A15972

DIAGNOSIS: RUPTURED CEREBRAL ANEURYSM

CLINICAL HISTORY: M/68. The patient developed hemiparesis with drowsiness going on to coma and death. An aneurysm of the right middle cerebral artery had been diagnosed six years previously.

MACROSCOPIC: The specimen consists of a sagittal section of brain. There is an aneurysm of the middle cerebral artery approximately 15mm in maximum dimension. This contains blood clot and has ruptured into the subarachnoid space and lateral ventricles. Secondary haemorrhages are present in the midbrain.

No microscopic sections taken.
