

CODE: TX200 M5470/1

ID NOS: HX275359 A16339

DIAGNOSIS: BRAIN - CEREBRAL SOFTENING

CLINICAL HISTORY: M/74. Cerebrovascular accident with right hemiplegia, eight years before death.

MACROSCOPIC: Specimen consists of the left cerebral hemisphere. The lateral cortical surface shows an extensive area of atrophy involving the temporal, parietal, and occipital lobes. This is the result of an old softening of the region supplied by the middle cerebral artery, which was atheromatous.

No photomicrographs taken.
