

CODE: TX200 M5475/5 E3212

ID NOS: HSR1051 A18060

DIAGNOSIS: TEMPORAL LOBE - CEREBRAL SOFTENING, POST HERPES SIMPLEX ENCEPHALITIS.

CLINICAL HISTORY: M/78. The patient had a history of Herpes simplex encephalitis 8 years before death followed by a dementing disease. He also suffered from chronic obstructive airways disease with recurrent episodes of pneumonia and congestive cardiac failure.

MACROSCOPIC: There is an area of cystic softening involving most of the right temporal lobe. The softening also extends on to the inferior surface of the adjacent portion of the right frontal lobe.

No photomicrographs available.
