

CODE: TX900 M9560/1

ID NOS: 36383 11437

DIAGNOSIS: NEURILEMMOMA (SCHWANNOMA) OF SPINAL NERVE

CLINICAL HISTORY: M/54. This specimen was removed from the intrathecal space of the spinal cavity and involved a spinal nerve.

MACROSCOPIC: The specimen is an encapsulated oval lesion, with a short segment of spinal nerve protruding from each pole.

MICROSCOPIC: The tumour has cellular Antoni A areas and less cellular Antoni B areas (middle image). The cellular areas have a predominant pattern of intertwining fascicles of uniform spindle cells, with palisading of nuclei in some areas (lower image).
