

CODE: T2800 F9494/17

ID NOS: 137080 4919

DIAGNOSIS: LUNG - FIBROCASEOUS TUBERCULOSIS

CLINICAL HISTORY: M/28. The only clinical history available is that left pneumonectomy was performed for pulmonary tuberculosis.

MACROSCOPIC: This surgically removed left lung is collapsed . On the cut surface several pale lesion are present, mainly at the apex and the base. A few of the larger lesions show chalky caseation.

MICROSCOPIC: The left image shows pink staining caseous necrosis. There are poorly formed tubercles containing giant cells at the periphery of the caseous lesion (right image). Acid fast bacilli were demonstrated in this case.
