

**CODE:** T2800 F9494/7

**ID NOS:** 142708 15542

**DIAGNOSIS:** LUNG - FIBROCASEOUS TUBERCULOSIS

**CLINICAL HISTORY:** M/age unknown. Left upper lobectomy was performed for pulmonary tuberculosis.

**MACROSCOPIC:** Near the apex of the lobe there is a mottled grey lesion 16mm across with paler caseous centre. Other similar but smaller lesions are scattered through the lobe.

**MICROSCOPIC:** Portion of the largest caseous lesion with inflammatory cells at the periphery, and one smaller lesion are seen (left image). Within the caseous area there are a few cholesterol clefts and patchy calcification (right image).
