

**CODE:** T2800 M4002/2

**ID NOS:** Donated specimen

**DIAGNOSIS:** LUNG – LOBAR PNEUMONIA

**CLINICAL HISTORY:** The patient died of overwhelming lung failure.

**MACROSCOPIC:** The appearance of this slice of lung tissue appears solid and airless and resembles liver tissue – so called grey hepatisation.

**MICROSCOPIC:** The alveoli are airless and are filled with an inflammatory exudate consisting mainly of neutrophils.
