

CODE: T2800 M8143

ID NOS: H393377 129505

DIAGNOSIS: LUNG – ADENOCARCINOMA
(BRONCHIOLO-ALVEOLAR ADENOCARCINOMA)

CLINICAL HISTORY: F/64. Nine months history of recurrent right lower lobe pneumonia. Biopsy showed adenocarcinoma, and pneumonectomy was performed.

MACROSCOPIC: The specimen consists of a portion of lower and middle lobes of the right lung. Almost the whole of the lower lobe and a portion of the middle lobe have a pale solid appearance which extends as nodules into the surrounding lung.

MICROSCOPIC: Sections show well-differentiated adenocarcinoma with a partly papillary pattern and a moderate amount of mucin production. In some areas, the tumour cells extend along the framework of the alveolar walls. This pattern of spread was previously called bronchiolo-alveolar adenocarcinoma.
