

CODE: T2800 M9350/1

ID NOS: HBX20655 28481

DIAGNOSIS: PULMONARY HAMARTOMA

CLINICAL HISTORY: F/43. A routine chest X-ray showed a 'coin' lesion lying beneath the pleura of the right upper lobe. A wedge resection was performed.

MACROSCOPIC: There is a well-demarcated spherical lesion lying immediately beneath the pleura. Its cut surface is a fairly uniform semitranslucent pearly white.

MICROSCOPIC: The lesion is well defined (left image) and is composed of fibrous tissue in which there are many irregular spaces lined by simple cuboidal epithelium (right image)
