

CODE: T13000 M88400

ID NOS: HX179129 154309

DIAGNOSIS: MYXOMA OF SKELETAL MUSCLE.

CLINICAL HISTORY: F/63. Pain and swelling in right buttock for six months. CT scan showed tumour in right gluteus maximus which was excised.

MACROSCOPIC: Specimen consists of adipose tissue and muscle, within which there is a circumscribed ovoid mass (up to 80mm in maximum dimension). The cut surface shows greyish white gelatinous tissue with scattered cystic spaces.

MICROSCOPIC: Sections show spindle and stellate cells in a myxoid stroma. There is minimal atypia and no mitoses are seen. Skeletal muscle fibres are seen at top right of the field.
