

CODE: T1300 M8840/2

ID NOS: RYDE 88503/79

DIAGNOSIS: MYXOMA OF THIGH.

CLINICAL HISTORY: M/66. Tumour back of left thigh, deep to biceps femoris, present for 2½ years. Patient alive and well three years after operation.

MACROSCOPIC: The specimen shows portion of partly encapsulated tumour with a soft, creamy “myxoid” appearance.

MICROSCOPIC: Sections show a myxoma in which there are satellite cells embedded in the myxomatous stroma. The tumour is predominantly well encapsulated but shows infiltration between skeletal muscle fibres in some areas. The tumour is relatively avascular and shows no mitotic features of malignancy.
