

CODE: T1600 F2623/1

ID NOS: HX113557 71838

DIAGNOSIS: OLECRANON BURSA IN GOUT.

CLINICAL HISTORY: M/60. This man had suffered from a painful swelling over his left olecranon for thirteen years. Both the pain and swelling varied from one month to another. The lesion was surgically removed.

MACROSCOPIC: A rather ragged walled irregular multiloculated space is surrounded by dense fibrous tissue.

MICROSCOPIC: Multinucleated giant cells and dense fibrous tissue surround structureless proteinaceous material. Clusters of acicular crystals were present elsewhere.
