

CODE: T0327 M8880

ID NOS: 110896

DIAGNOSIS: HIBERNOMA.

CLINICAL HISTORY: F/31. Lump from shoulder region. Unknown duration.

MACROSCOPIC: Portion of an encapsulated tumour (maximum dimension 7.5cm). The cut surface has a slightly lobulated, soft, yellowish brown appearance.

MICROSCPIC: Sections show “hibernoma” cells which are large foamy cells, the cytoplasm containing numerous small round lipid filled vacuoles. Mature fat cells and cells with granular cytoplasm are also present.
