

CODE: T7100 F9492/5

ID NOS: H325422 118093

DIAGNOSIS: KIDNEY - TUBERCULOSIS

CLINICAL HISTORY: F/42. The patient was born in the Philippines. She had recurrent urinary tract infections for many years, and a non-functioning left kidney was removed. Culture positive for acid-fast bacilli.

MACROSCOPIC: Specimen consists of portion of a kidney. The capsular surface shows small nodular projections. The cut surface shows a number of cavitating lesions, which are rather thick walled and contain cheesy material.

MICROSCOPIC: Numerous caseating epithelioid and giant cell granulomata are present throughout the cortex and medulla.
