

CODE: T7100 M8313/9

ID NOS: H92903; A11345

DIAGNOSIS: KIDNEY - CLEAR CELL RENAL CELL CARCINOMA.

CLINICAL HISTORY: M/75. Palliative surgical treatment had been undertaken a month before death to relieve some of the symptoms of carcinoma of head of pancreas. Autopsy showed widespread metastases. This renal lesion was an incidental finding.

MACROSCOPIC: A moderately well demarcated mottled tumour is situated in the lower pole of this kidney. There is also a mild hydronephrosis and two of the papillae are pale and cavitated indicating old papillary necrosis.

MICROSCOPIC: A fibrous capsule separates this histologically typical clear cell renal carcinoma from surrounding renal tissue.
